

# HAZARDOUS MATERIALS

## Combat danger with knowledge.

Every day, hundreds of thousands of hazardous materials are shipped around the world via truck, ship, rail or plane, often through heavily populated or environmentally sensitive areas. Geoforce's GPS-based hazardous material tracking solutions give shippers and handlers the assurance they need to properly manage the risks.

With today's heightened concerns about the environmental impact of these materials, and terrorism and security concerns putting everyone on high alert, Geoforce gives you control over your hazardous materials and the peace of mind of knowing that your materials are always secure and accounted for, whether in your facility or in transit around the world.

By managing your hazardous materials with Geoforce's GPS-based system, you'll have:

- Near real-time visibility of hazardous materials, from cradle to grave, even if the "cradle" and the "grave" are in different parts of the world
- The power to provide clear visibility of every movement of hazardous materials to authorities and other third parties as needed
- On-demand knowledge of the historical location and route materials have traveled
- Automatically generated email alerts based on parameters you set

DATE/TIME	LOCATION	AMOUNT
06/20/2011 17:15:52	Fair Temple Assembly of God Church, Dallas, TX 75206, USA	87
