

REMOTE WORKERS

Expand your field of vision.

In the oil and gas industry, workers frequently must work alone in high-risk, remote or dangerous locations around the world. Because these locations often have limited or non-existent communications access, the risks presented to both employees and companies are enormous.

Geoforce's remote worker tracking solutions, built in partnership with a major international oil company, provide the visibility and communications typically lacking in these situations, and give employees peace of mind that they're not alone in the field. Remote tracking helps ensure the safety of workers on offshore platforms, pipelines and other remote locations by significantly mitigating risk.

By managing the safety of your remote workers with Geoforce, your business has:

- A solution that works globally, with features designed specifically to ensure worker safety in remote oil and gas operations
- A 100% satellite-based technology that operates where cellular technology will not
- A solution certified for use in the explosive atmospheres common in the oil and gas industry (Class 1, Div. 1)
- An enterprise software product hosted at an SAS 70 data center with 24-hour physical security, 256-bit Extended Verification SSL encryption, Entrust certificates and always live data recovery

- Enterprise-grade web services and data integration with your existing business systems, allowing for seamless reporting and decision making
- Dashboard features offering near real-time operating data and metrics that are immediately actionable

In control. On demand.

Common Applications:

- Lone Workers
- Pipeline Workers
- Refinery Workers
- Construction Site Workers
- Pumpers
- Platform Workers

Manage Everyone in One Place

Corporate GIS software is available all on a single full-screen map with Geoforce, so you can seamlessly manage the health and safety of thousands of workers with one system.

Meet Safety Mandates

Geoforce gives you the ability to meet government mandated remote and lone worker reporting requirements.

Receive Instant Alerts

Automatic notifications are sent to both emergency responders and company colleagues who can help when needed.
