

# On-Site Expertise: Professional GPS Field Services with Geoforce

## Empowering Precision and Performance with Tailored Local Installation and Support

We understand that the foundation of any successful tracking initiative lies not only in the technology itself but in the expertise and precision with which it is implemented. Our dedicated field services are designed to ensure that your GPS tracking solutions are not just installed but are seamlessly integrated into your operations, enhancing your assets' security, optimizing performance, and unlocking unprecedented levels of operational insight.

Our field services offerings allow you to redefine the way you monitor and manage your assets, setting your team up for success each time you install a new set of devices.

We offer our field services in two grouped solutions. A "train the trainer" session or dedicated on-site assistance.

**If you plan to self-install, we recommend having us on-site for a "train the trainer" session. In this session we will:**

- Find the ideal GPS device installation location for your specific assets
  - Best skyview for battery powered trackers increases battery life
  - Best installation location increases GPS location accuracy for certain devices
  - Best sunview location for solar powered trackers improves performance
  - Ensure vehicle trackers and cameras are installed properly and securely
  - Ensure equipment trackers are capturing proper engine parameters
  - Discuss covert installs if theft of GPS device is a concern
- Document installation instructions for your team by asset type

## What We Do:

1. Assist in inventorying assets that will require an install
2. Evaluate all assets and recommend install location
3. Install and activate tracking devices on each asset
4. Ensure set-up and reporting configuration in the Geoforce platform
5. Provide guidance on asset image uploads, named location set-up, etc.

## About Geoforce

Geoforce was founded in 2007 with the simple belief that the chaos and pain of field operations could be alleviated with technology. Since then, our mission has been to provide our customers and partners with cutting-edge traceability solutions and insights.

Combining a cloud-based software platform with rugged GPS tracking devices and global satellite and cellular networks, Geoforce's solutions include efficient asset location and retrieval, rental invoice auditing, service delivery verification, inspection compliance, equipment maintenance alerts, and a host of others.

- Ensure wiring is correct on wired units and not damaging equipment
- Share tips and tricks to accelerate the installation process

This "train the trainer" session can be one day or up to a week depending on your fleet size. You may have the expertise to do these installs yourself, but there are benefits to having us lighten the load.

### If you would prefer that we install, we offer the following:

- On-site techs - so that your team can focus on what makes your business money
- Professional installation - one of the major reasons GPS initiatives fail is improper install. Get it right from the start!
- Quicker deployment - the faster you can get your devices installed, the faster you can start getting value from Geoforce
- Extended warranty - we provide 3 year warranties on any device we install
- GPS data verification - we confirm your device is properly reporting into the software before leaving your location
- Device set-up - we will ensure your devices are set up properly with accurate information in the platform so you don't have to!
