

Hydrus Energy Solutions is an environmentally responsible oil field service company providing the finest in flameless heat.

## How Hydrus Energy Safeguards Assets and Simplifies Field Operations With Geoforce

Hydrus Energy and Environmental Solutions provides specialized services and equipment that support oil and gas production, midstream operations, and industrial projects across North America. Their team combines deep industry experience with a strong commitment to safety, regulatory compliance, and customer success.

With a diverse fleet that includes heating systems, fluid management, lighting, tanks, and remote power, Hydrus is equipped to handle the demands of complex field environments. Beyond rentals, they offer technical expertise and responsive service, building trust as a dependable partner. This focus on performance and accountability has earned Hydrus a reputation for reliability across the energy and industrial sectors.

### Challenge

Hydrus works across large, often remote sites where equipment is constantly moving to meet changing field conditions and customer demands. With multiple projects underway and assets frequently relocated, it became hard to know exactly where critical equipment was at any given time. Traditional mapping tools lacked the precise, current data needed to plan field service visits and avoid carrying excess inventory. Without a better tracking solution, staying on schedule meant extra trips, manual checks, and too much guesswork.

## HOW GEOFORCE HELPS

- **0% Asset Misplacement Since Install**
- **Reduced Manual Inventory Hours**

**Geoforce enables customers to manage critical equipment, avoid manage fleet availability, and, in general, operate more efficiently.**

“

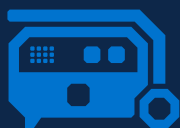

**We haven't lost a single asset since putting Geoforce in place. It's made planning so much easier for our team, and your customer service is phenomenal.**

## About Geoforce

Geoforce was founded in 2007 with the simple belief that the chaos and pain of field operations could be alleviated with technology. Since then, our mission has been to provide our customers and partners with cutting-edge traceability solutions and insights.

## Solution

To address these challenges, Hydrus implemented Geoforce's tracking platform, using AT2, GT1, and GO9 devices across their fleet. This gave them real-time visibility of tanks, generators, trucks, light towers, and more, all managed through a single system. They can now track exact locations, engine hours, and asset usage while customizing records with IDs and VINs to fit their workflows. Seasonal billing flexibility also lets Hydrus pause charges during slower periods without losing access to their data. The result is a scalable solution that makes managing operations easier and more precise.

## Results

With Geoforce in place, Hydrus has eliminated the guesswork in tracking equipment. Their team spends less time on manual checks and sends techs out with only what's needed, improving efficiency and cutting unnecessary site visits. Since deploying the system, they haven't lost a single asset, a big change from past seasons. Geoforce's responsive support continues to help them fine-tune records and address questions quickly, giving Hydrus stronger asset protection, smoother operations, and a flexible system that grows with their needs.

## Products Used: AT2, GT1, & GO9

Tank, truck, and generator location monitoring with Geoforce's advanced AT2, GT1, and GO9 devices and connected software platform.
