

TRACK & TRACE FOR VEHICLES

Because field operations don't have to be chaotic.

In the oilfield, vehicles and equipment are tightly linked. Geoforce's Track and Trace software allows vehicles and other types of equipment to be managed in one system. Dispatchers can locate nearby vehicles with the added context of equipment location to more efficiently manage all assets and operations.

WHERE'S MY **VEHICLE**?

- Dispatch more efficiently
- Improve response times
- Plan field operations

WHERE'S MY **RISK**?

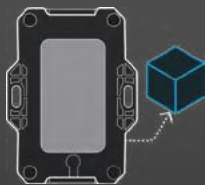

- Monitor driver behavior
- Confirm maintenance is current
- Reduce downtime on jobs

WHERE'S MY **PROFIT**?

- Verify service delivery
- Avoid billing disputes

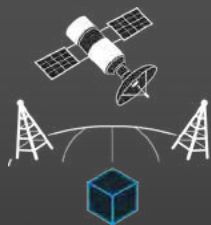

GEOFORCE IN ACTION

INSTALL

Vehicles that require tracking are identified and purpose-built tracking devices are installed on each asset.

TRANSMIT

GPS and data are transmitted via global satellite and cellular networks. Secure Tier 1 data centers receive, process and enrich the data, then feed applications.

TRACK

Enriched asset data is viewed via the web and mobile devices, solving key operational challenges.
